

Keeping the GPU supplied across 1,020 windows

Same sampled windows and loss sequence | BF16 | Conv2d + query-only | BS1

1,008 measured updates after warmup. Pread trials requested eviction of clean input-file pages.

Final reader wait: 0.27 ms mean; 0.41 ms P95; 0.40% of average step time.

Physical reads: 15.33 → 6.86 MB / window
Requested JPEGs: 6.73 MB / window

Initial dual-hash verification: 270 s for 501 clips / 59.91 GB (shared within the final sweep; excluded from rates above).

Cache eviction is an OS hint. Single-machine diagnostics, not an accuracy claim. Source: captured JSON, 2026-10-09.
